Smart Tickets Availability Management (STAM)

JLTicketCenter has a Smart Tickets Availability Management (STAM) that checking the current tickets availability and doesn't let user to buy more tickets then available.
 The STAM system include cart tickets reservation ability base on timer. Cart has timer so you can set the cart to reserve tickets on cart for certain time, and during this time tickets are reduce from total available tickets. In case user hasn't complete the order during this time, the cart is cleared and then tickets become available again.

Tickets Ordering

Tickets order includes PayPal payment integration and online tickets vouchers, choosing delivery methods.
 The component also send email vouchers for tickets (depend on delivery methods).

Delivery methods

JLTicketCenter support various delivery methods and administrator may add and remove delivery methods, set prices and choose if it include email vouchers or not.

Cart Module

JLTicketCenter include Cart Module so you may put Cart module anywhere you wish like any Joomla module.

Backend control

The component has fall backend control over a lot of behaviors and fall data control so administrator can add events, venues, city, states, country and more.

   NOTE – Don't confuse this component with JLTicketCity that working with API.

JLTicketCenter is `classic` Joomla component and has it own fall backend management abilities.   **Design**
